

Assignment 3, Question 1

A viewer with Protanopia would have a difficult time discerning between the green and red datapoints. They would have a yellow-grayish hue and they would be forced to rely on relative size of the circles to understand the visualization.

The Change in Local Authority House Prices for England & Wales

A viewer with Protanopia would also struggle with this visualization. Many of the lines and dots are red and green, and in smaller graphs such as that of Super Bowl XLIX, the red dots and green lines would look awfully similar.
